

Collocating satellite data & unsupervised classification

Dr. Michel Tsamados

m.tsamados@ucl.ac.uk

Overview

Part 1 – Collocating satellite data

- Many satellite layers
- Metadata rather than data
- Sea ice a moving target

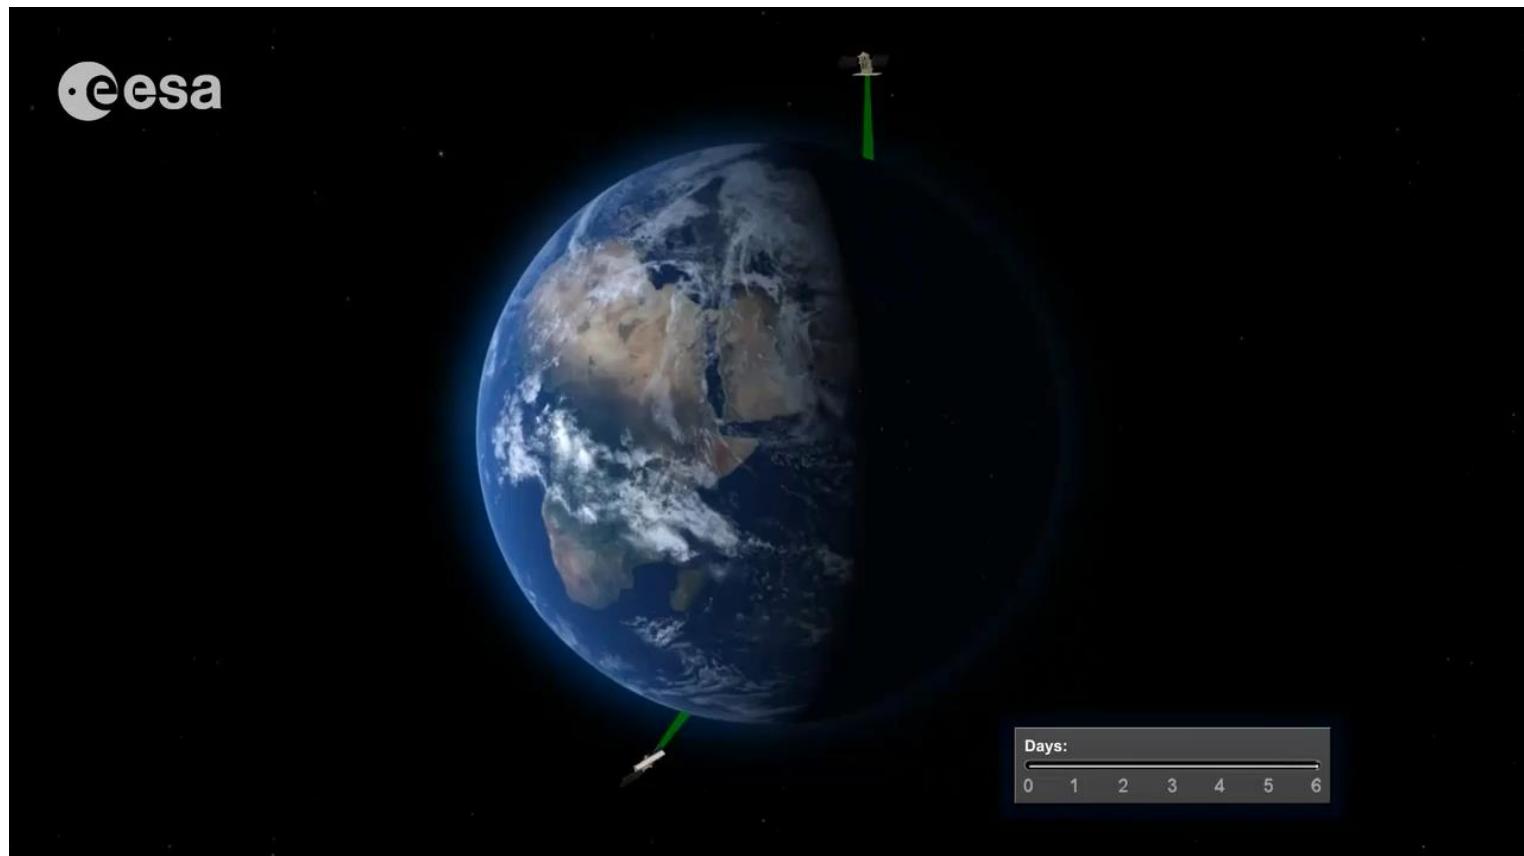

Part 2 – Unsupervised classification

- K-means algorithm idea
- Application to image classification
- Application to echo classification

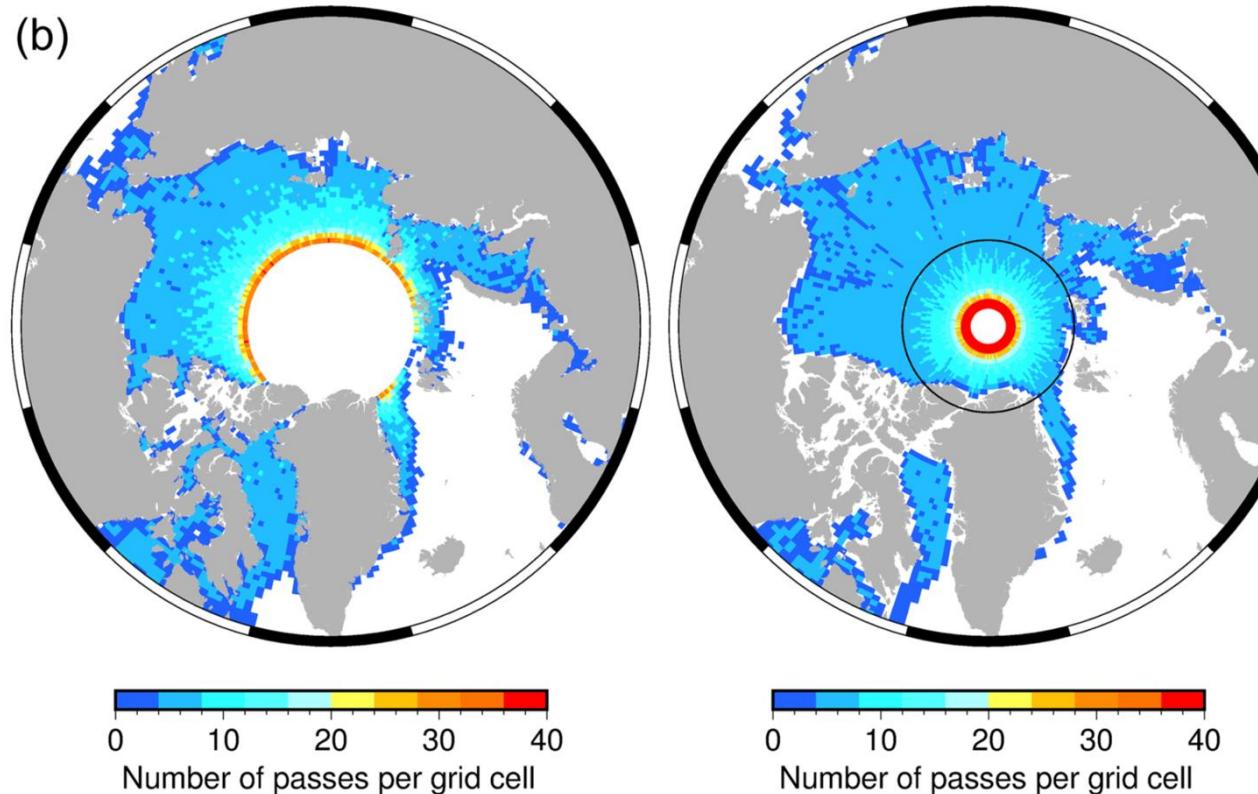

Sentinel-2 global coverage

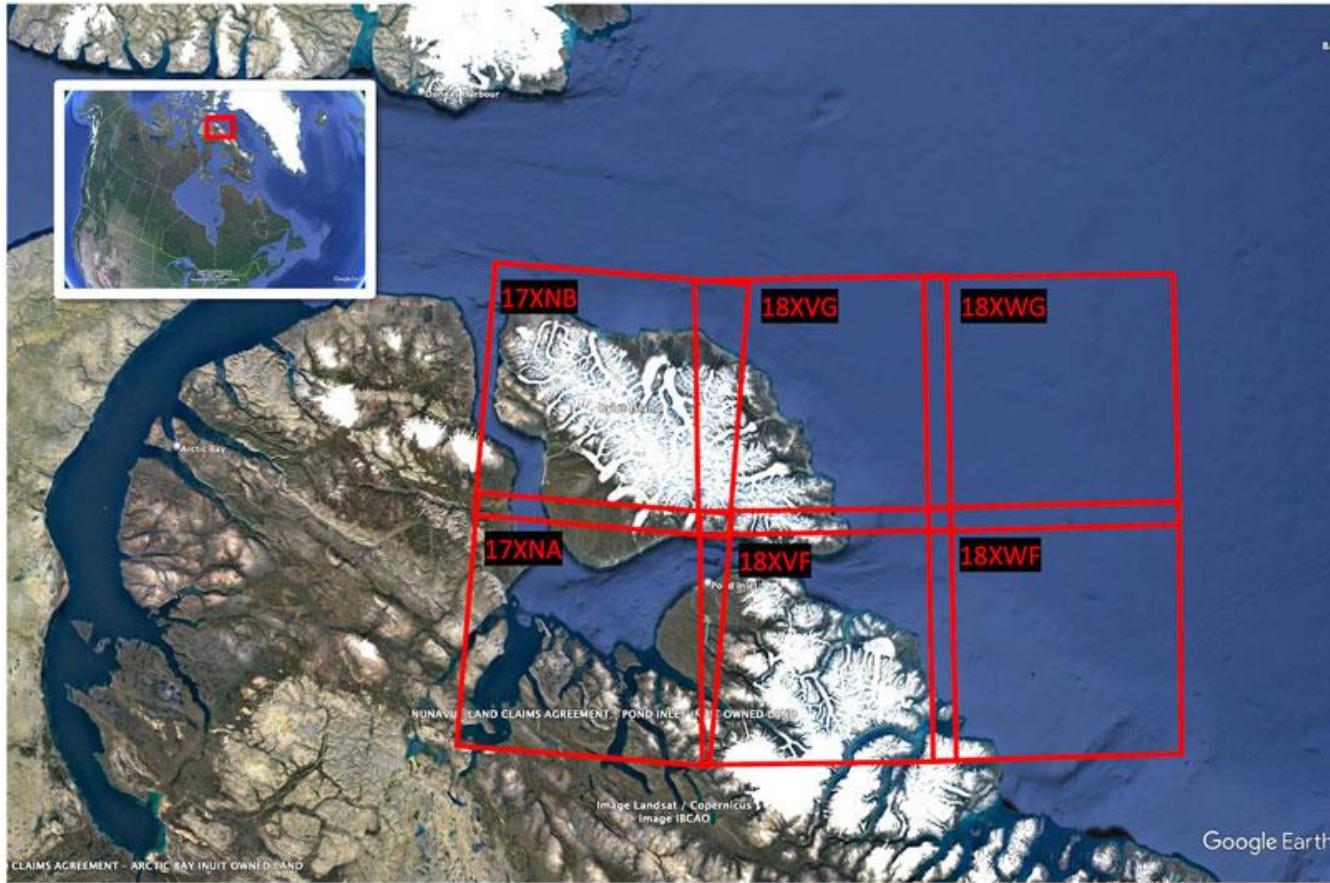

Sentinel-1 global coveage

Density maps for CryoSat-2 and Altika

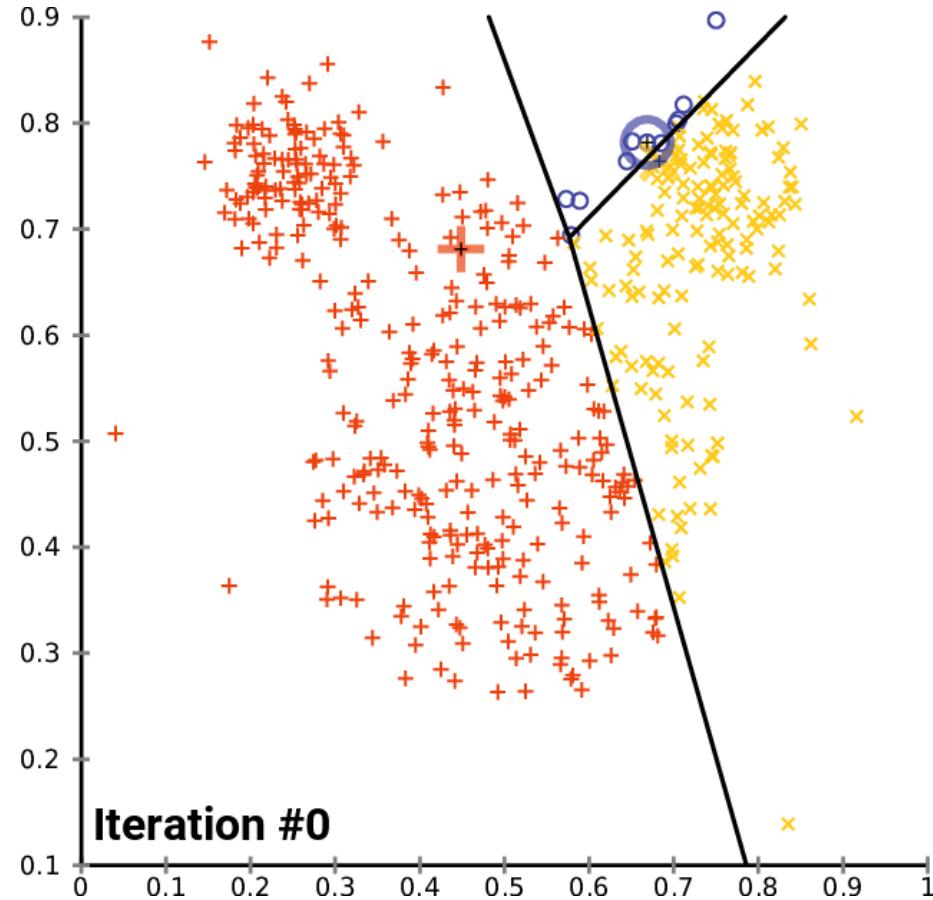

LECTURE #4 – Satellite collocation & Unsupervised classification

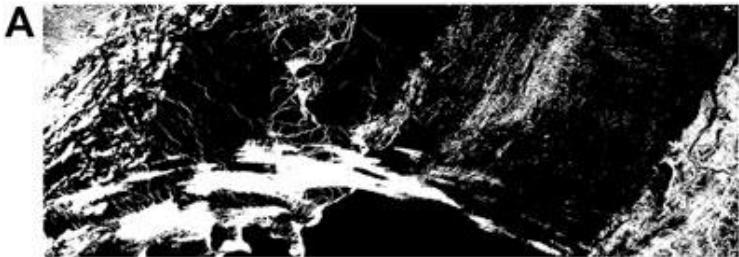

K-means algorithm

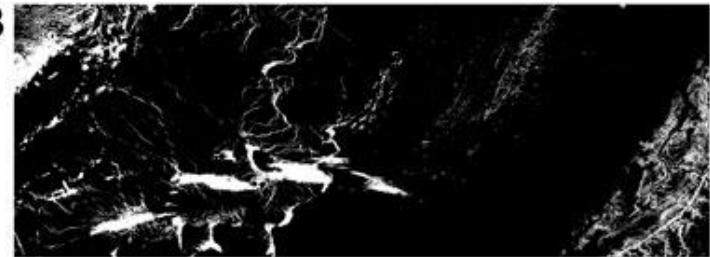

1. Plot Data
2. Select the number K to decide the number of clusters.
3. Select random K points or centroids.
(It can be other from the input dataset).
4. Assign each data point to their closest centroid, which will form the predefined K clusters.
5. Repeat the fourth step, which means reassigning each data point to the new closest centroid of each cluster.

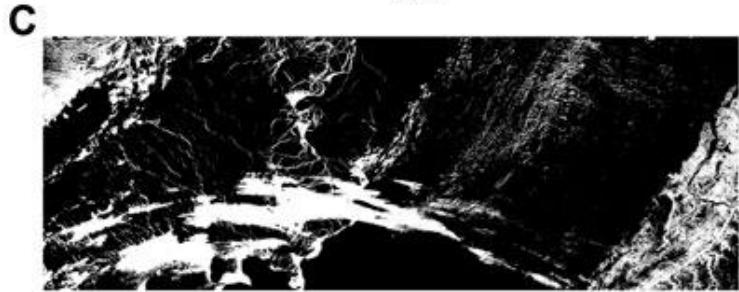

LECTURE #4 – Satellite collocation & Unsupervised classification

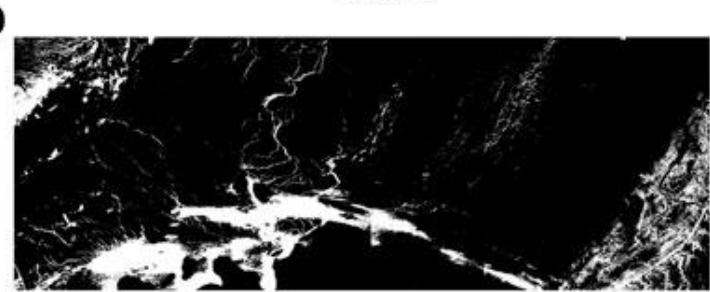

CNN

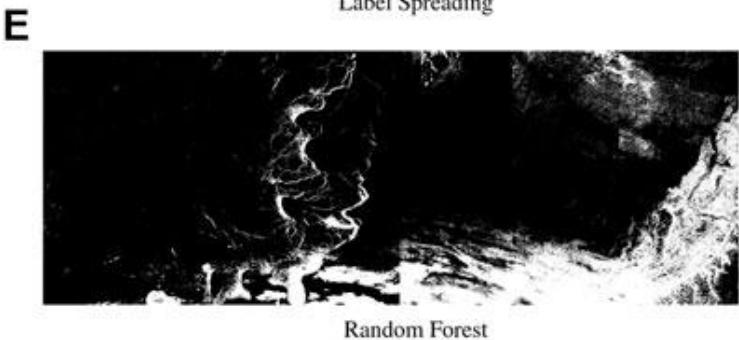

K-Means

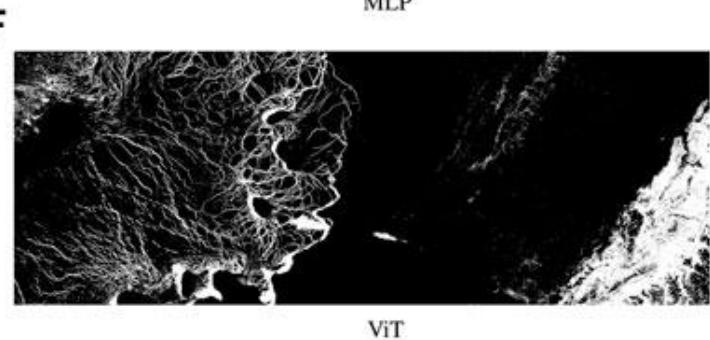

Label Spreading

MLP

Random Forest

ViT
